MGFA Scientific Session at AANEM 2025, San Francisco, CA, USA; October 29, 2025

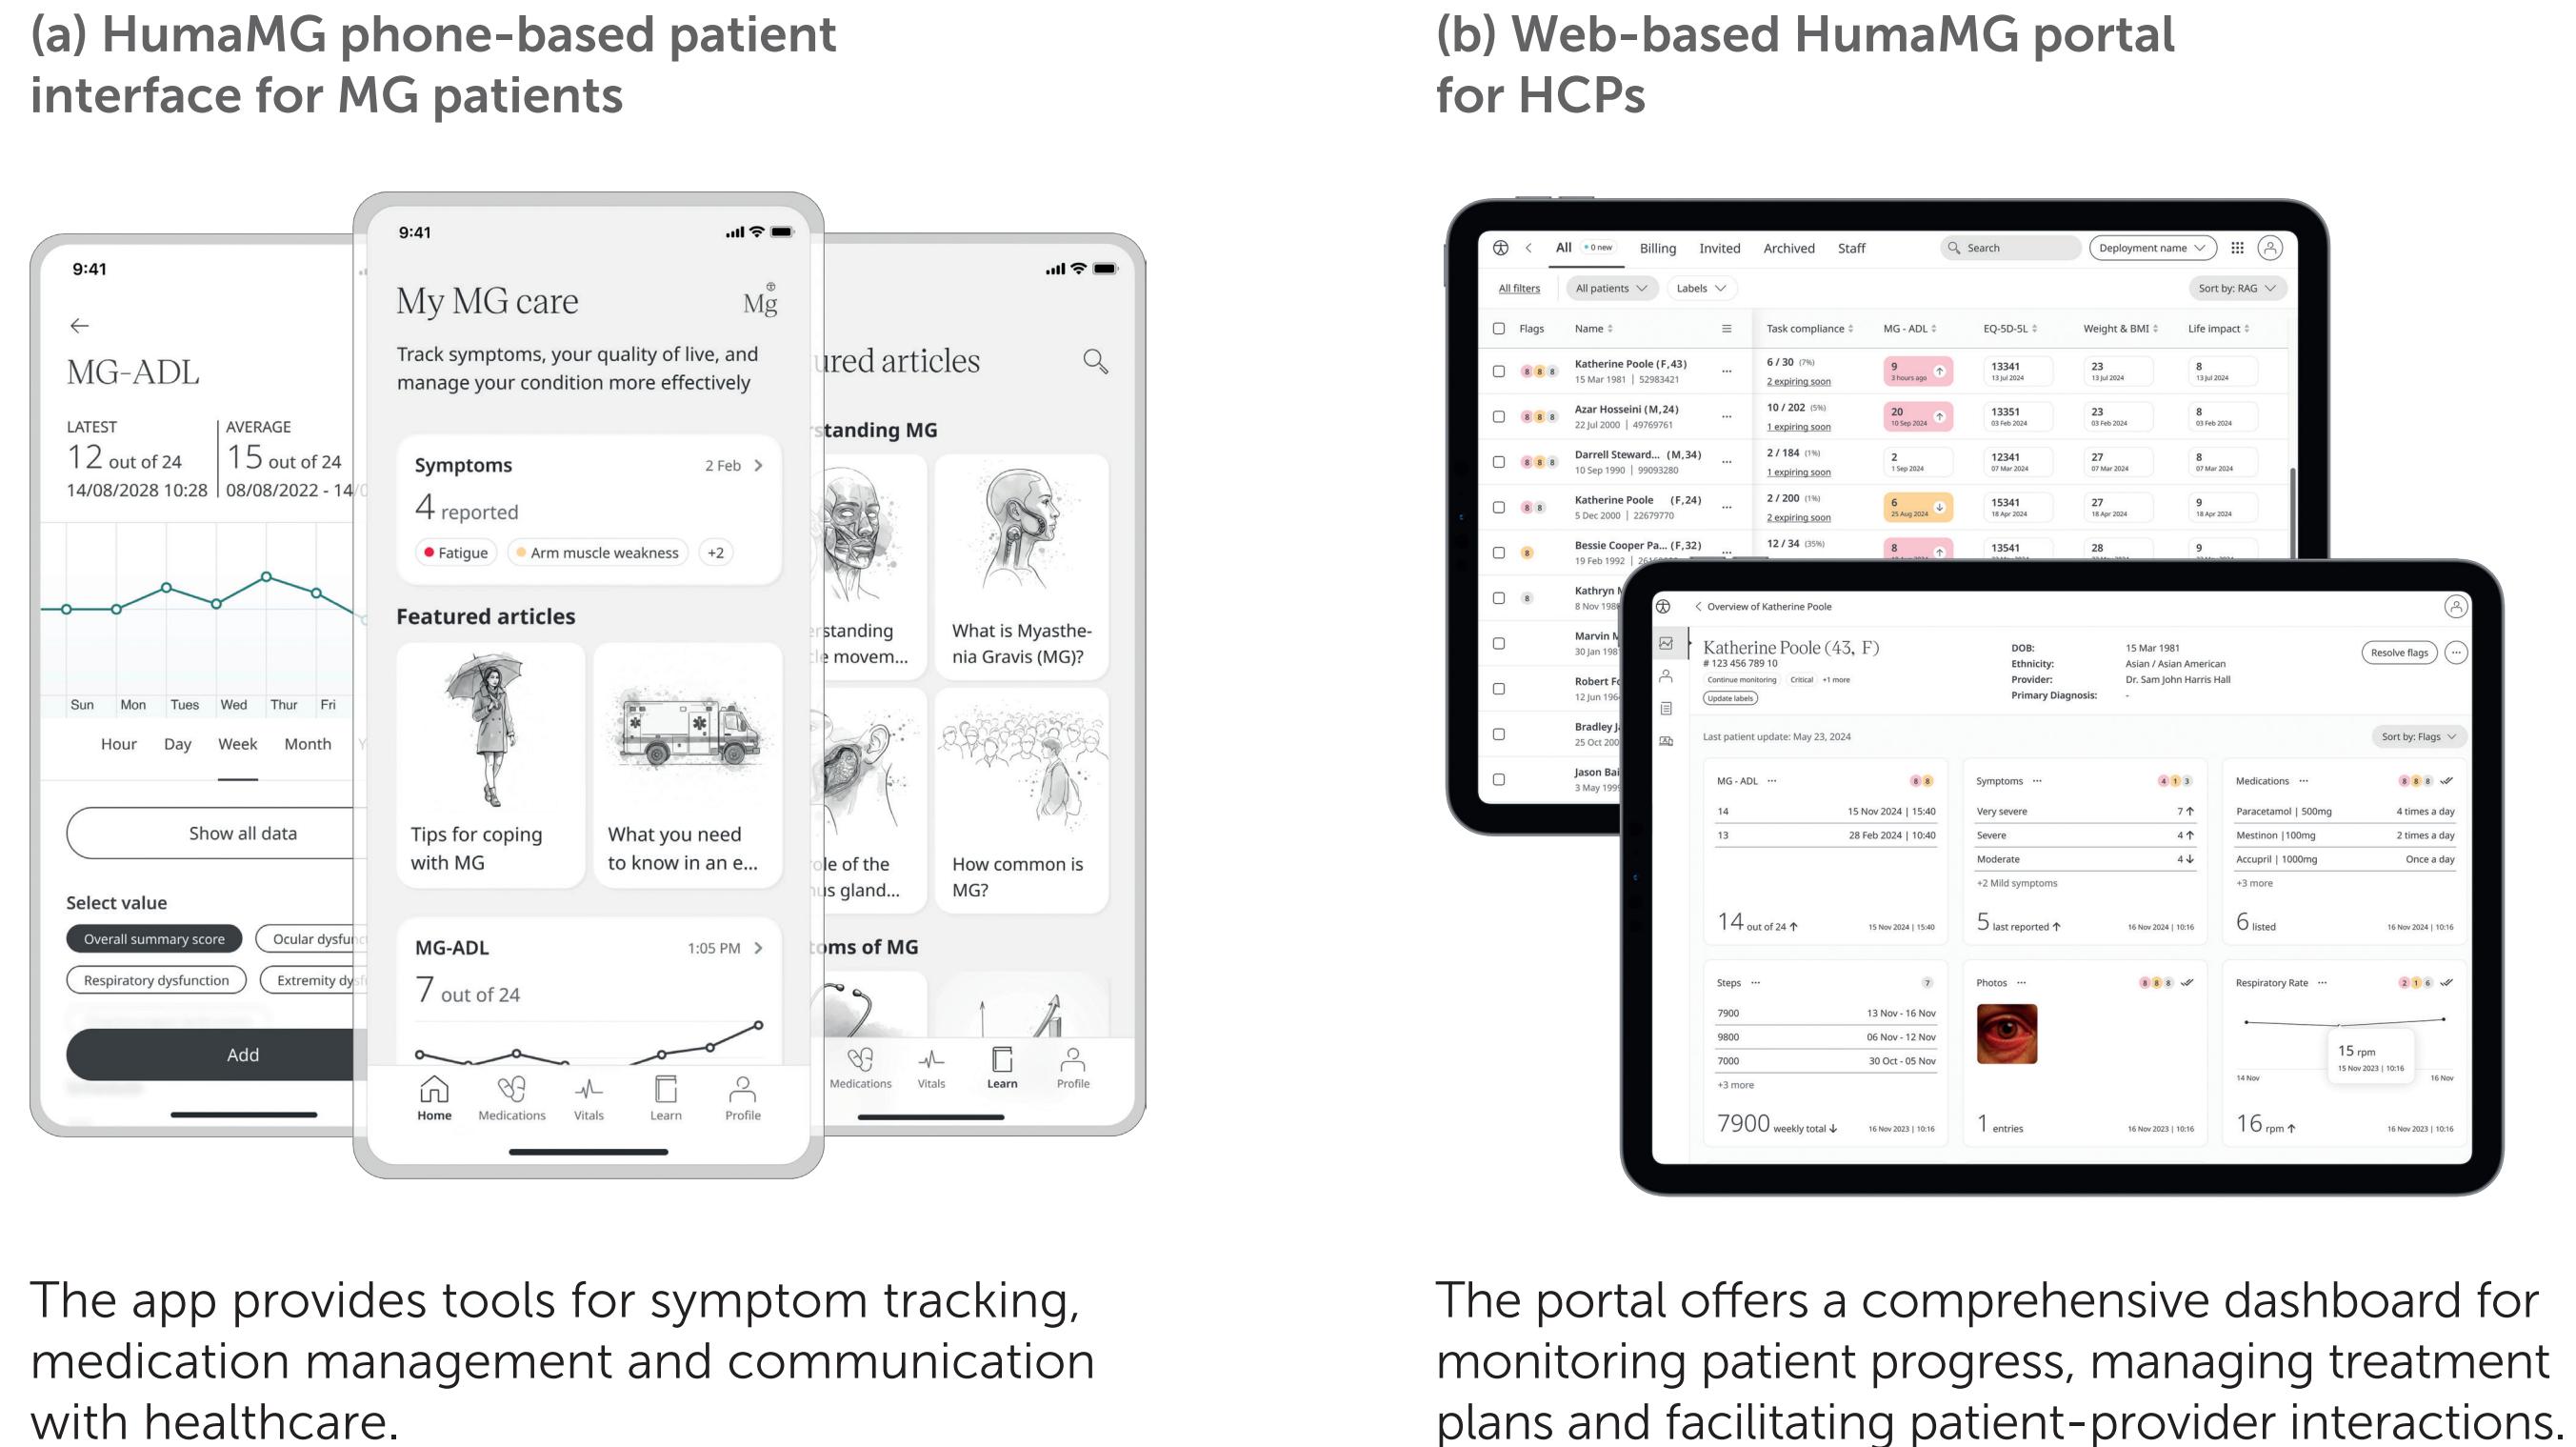

## Introduction

- MG is a chronic autoimmune disorder characterized by fluctuating muscle weakness
- The HumaMG app (Figure 1) enables remote real-world data collection directly from patients, deployed in the US via a direct-to-patient (D2P) model and in the UK through remote patient monitoring (RPM) prescribed by an HCP at St. George's Hospital
- This analysis aimed to describe patient characteristics and assess data completeness and retention patterns across deployment models, to evaluate the feasibility of generating real-world data

## Methods

- A cross-sectional analysis was conducted on app data from 321 out of 386 patients (83.1%) who consented to data sharing
- Demographics, clinical characteristics, treatment data, PROs and retention were analyzed descriptively
- Dynamic retention was defined as the percentage of patients who remained active on the app at each week following onboarding. At each timepoint, only patients who had been enrolled for at least the corresponding number of weeks were included in the denominator. Patients were considered actively retained if they logged at least one clinically meaningful PRO score in that week

Figure 1 HumaMG app description

The app provides tools for symptom tracking, medication management and communication with healthcare.

## Results

- Among the 321 patients who consented to data sharing, 264 (82.2%) were enrolled via D2P (US) and 57 (17.7%) via RPM (UK)
- 88% of patients completed the demographics and MG profile questionnaire and 73.5% of patients entered medication data at baseline
- Most patients were female (73.7%) and 33.8% of patients were aged >55 years. Early-onset MG patients accounted for 75.5% of the patients, with double vision (17.8%) and eyelid drop (17.5%) being the most common initial symptoms (Table 1)
- Approximately half of patients had undergone thymectomy
- Initial PROs indicated moderate disease burden (RPM n=48, median MG-ADL: 5.0 [IQR: 5.25]; median EQ-5D-5L: 62.5 [IQR: 28.0] and D2P n=254, median MG-ADL: 8.0 [IQR: 6.0]; median EQ-5D-5L: 64.0 [IQR: 25.0]) (Figure 2)
- Retention after onboarding was higher in the RPM group compared with the D2P group. At Week 12, 84.4% of RPM patients remained active vs 32.3% of D2P patients; at Week 26, active retention was 76.5% and 12.3%, respectively
- These results suggest deeper engagement when use of the app is embedded in clinical care (Figure 3 and Table 2)

## Summary and conclusions

HumaMG collects high frequency MG disease burden metrics which can generate unique insights into the MG patient population

Despite the large difference in patient numbers at baseline between D2P and RPM, data from the latter group suggested stronger engagement and retention

These findings demonstrate the feasibility and potential of the HumaMG app for generating high-quality real-world data, particularly when integrated into clinical care pathways

Table 1 Demographics of users at enrollment & MG onset description

Category	Subcategory	All	RPM St. George's Hospital (UK)	Direct-to-patient (US)
Responders (n)		<b>281</b>	<b>37</b>	<b>244</b>
Age at onboarding, n (%)	16–25	6 (2.1%)	5 (13.5%)	1 (0.4%)
	26–55	180 (64.7%)	19 (51.4%)	161 (66.0%)
	56–65	50 (17.8%)	3 (8.1%)	47 (19.3%)
	≥66	45 (16.0%)	10 (27.0%)	35 (14.3%)
Sex, n (%)	Female	207 (73.7%)	20 (54.1%)	187 (76.6%)
	Male	73 (26.0%)	17 (45.9%)	56 (23.0%)
	Not answered	1 (0.4%)	0 (0.0%)	1 (0.4%)
Age at diagnosis, n (%)	Early onset (<50 years old)	212 (75.5%)	24 (64.9%)	188 (77.0%)
	Late onset (>50–<65 years old)	50 (17.8%)	5 (13.5%)	45 (18.4%)
	Very late onset (≥65 years old)	19 (6.8%)	8 (21.6%)	11 (4.5%)
	Pain	20 (2.9%)	4 (4.0%)	16 (2.7%)
	Fatigue	69 (10.0%)	8 (8.0%)	61 (10.3%)
	Sleep problems	21 (3.0%)	3 (3.0%)	18 (3.0%)
	Unknown	2 (0.3%)	0 (0.0%)	2 (0.3%)
	Not listed	11 (1.6%)	1 (1.0%)	10 (1.7%)
First symptoms, n (%)	Drooping of one or both eyelids	121 (17.5%)	20 (20.0%)	101 (17.1%)
	Blurred or double vision	123 (17.8%)	16 (16.0%)	107 (18.1%)
	Change in voice/speech	66 (9.5%)	11 (11.0%)	55 (9.3%)
	Difficulty swallowing	59 (8.5%)	11 (11.0%)	48 (8.1%)
	Shortness of breath	57 (8.2%)	6 (6.0%)	51 (8.6%)
	Weakness in the arms/legs	108 (15.6%)	14 (14.0%)	94 (15.9%)
	Head drop	35 (5.1%)	6 (6.0%)	29 (4.9%)
